- You can buy and sell shares in the fund every business day.
- The fund aims to distribute available income every quarter.
- Derivatives may be used to manage the risk profile of the fund, reduce costs or generate additional income.
- Recommendation: This fund may not be appropriate for investors who plan to withdraw their money in the shorter term (e.g. less than 3-5 years).

Risk and reward profile

- This indicator shows how much a fund may have risen and fallen in the past, and therefore how much a fund's returns may have varied. It is a measure of a fund's volatility. The higher a fund's past volatility the higher the number on the scale and the greater the risk that investors in that fund may have made losses as well as gains. The lowest number on the scale does not mean that a fund is risk free.
- The fund has been classed as 5 because its volatility has been measured as above average.
- This indicator is based on historical data and may not be a reliable indication of the future risk profile of this fund.
- The risk and reward profile shown is not guaranteed to remain the same and may shift over time.
- Counterparty Risk: As the fund may enter into derivative agreements there is a risk that other parties may fail to meet their obligations. This may lead to delays in receiving amounts due to the fund, receiving less than is due or receiving nothing.
- Currency Risk: As the fund invests in overseas securities movements in exchange rates may, when not hedged, cause the value of your investment to increase or decrease.
- Illiquid Asset Risk: Investment in illiquid assets, where there is no active market, may be more difficult to buy and sell and their prices may also be subject to large short term swings.
- For full details of the fund's risks, please see the prospectus which may be obtained from the address in 'Practical Information' overleaf.
